Summary

Junior Software Developer with 1 year of experience in building and maintaining web applications using Ruby on Rails, JavaScript, and Next.js. Skilled in backend development, REST API design, debugging, and database management. Passionate about building scalable and efficient applications.

Experience

Voyager Valley Technologies

Oct 2024 – Present

Junior Software Developer

Tamil Nadu, India

- Contributed to the development of **HostVize**, a property booking and management platform, by working across 2 core systems: Next.js frontend dashboard and Ruby on Rails backend API services.
- Migrated 5+ frontend modules including Dashboard, Forgot Password, and Reset Password from JavaScript to TypeScript, improving code maintainability and reducing runtime errors.
- Developed 6+ dashboard features including booking availability toggle, booking drawer interface, client-switch functionality, logout system, and dynamic settings integration.
- Integrated internationalization (i18n) support across 10+ pages, enabling multi-language functionality and improving usability for diverse users.
- Created and updated 8+ database migrations in Ruby on Rails, adding business-related fields, GSTIN support, and enhancing data structure in PostgreSQL.
- Designed dynamic room configuration system using ActiveRecord store_accessor, supporting 7+ bed types and 3 meal options for flexible room management.
- Resolved 15+ backend and frontend issues related to client management, property records, room data, authentication flow, and location validation including pincode handling.
- Enhanced user experience by integrating toast notification system across multiple workflows, improving user feedback for success, warning, and error states.
- Improved dashboard data accuracy by fixing property images, holiday pricing display, Google Maps links, and check-in/check-out time synchronization with backend.
- Collaborated with cross-functional teams using Git-based workflows to debug issues, maintain clean code standards, and ensure seamless integration between frontend and backend services.

Voyager Valley Technologies

Jul 2024 – Sep 2024

Junior Software Developer Intern

Tamil Nadu, India

- Built foundational knowledge in Ruby on Rails, understanding MVC architecture, models, controllers, routing, and backend development concepts.
- Learned REST API structure and integration between Next.js frontend and Rails backend services.
- Worked with PostgreSQL database to understand data storage, querying, validations, and ActiveRecord associations.
- Developed basic user interface components using Next.js and Tailwind CSS, understanding routing and component-based architecture.
- Practiced debugging, code reading, and version control using Git while working with an existing production codebase.

Technical Skills

Languages: Ruby, JavaScript

Frameworks/Libraries: Ruby on Rails, Next.js, React.js, Tailwind CSS

Web Technologies: HTML, CSS

Databases: PostgreSQL

Tools: Git, Docker, VS Code, Postman

Education

Government College Of Engineering, Thanjavur, Tamil Nadu

Sep 2020 – May 2024

Bachelor of Engineering in Electronics and Communication

CGPA : 7.87
